Pipe Organ for Sale
Wichita, Kansas
Built in 1996 by Smith Organ Company
Two manuals, 3 ranks

This electro-pneumatic instrument was designed as a residence organ. The entire instrument, including the blower, is enclosed in a handsome case of medium oak with matching bench. The vintage pipework was all reconditioned by the builder at the time of installation and would again benefit from regulation. Keyboards were also refurbished and the coverings are in very good condition. Mechanical expression shades operate smoothly from behind the central grill. The stop controls and switching system were supplied by Peterson. Although the case stands at about 8 feet and the grill and some side panels are removable, primary access panels are on top of the enclosure.

This organ is offered on consignment on behalf of the owner’s estate for $5000.00 or best offer and may be seen by appointment.
